Fire Blankets

Specification

- Composition:
Fiberglass with silicone coat
- Density: 480 g/m²
- Reaction to fire classification: A2-s1

General Description

A Vehicle Fire Blanket is a highly effective and easy-to-use solution designed to quickly contain and suppress vehicle fires, especially in electric vehicles where traditional extinguishing methods can be challenging.

Manufactured from advanced, high-temperature resistant materials, the blanket is simply deployed over the burning vehicle to cut off oxygen, control flames, and significantly reduce heat, smoke, and toxic emissions.

Ideal for use in parking facilities, tunnels, workshops, and roadside emergencies, it helps prevent fire spread to nearby vehicles and structures while enhancing safety for responders and bystanders. Compact, reusable, and requiring minimal training, the vehicle fire blanket is an essential addition to modern fire protection and emergency response systems.
